00122417 The objective of the CBIT project is to assist Mauritius on improving the quality of the national GHG inventory and the data collection, storage and dissemination processes associated, thereby improving reporting and transparency and providing a firmer basis for evidence-based-policy-making. Without this project and GEF intervention, Mauritius will not be able to improve the national GHG inventory and strengthen the underlying inventory processes, which have immediate benefits for national reporting (the National Communications and2 | P a g eBiennial Update Reports), for the tracking of emissions progress against the NDC targets and for future revisions to the NDC target. Further, the country will not be able to increase broader institutional engagement in GHG transparency from the private sector and from civil society, resulting in improved evidence-led policy-making and better integration of the inventory in national development policies and programmes. To achieve its objective, the project is organized around three main components: i) Improve the accuracy and localisation of the national greenhouse gas inventory, ii) strengthen the national greenhouse gas inventory process and iii) mainstream the national greenhouse gas inventory to enhance transparency and support policy-making. Altogether these three components will enhance capacities to meet the provisions stipulated in Article 13 of the Paris Agreement.
