01002412 Climate change represents a major challenge for Guinea-Bissau's economy, geography and settlements as it will threaten livelihoods of those who depend on natural resources for a living. Monitoring climate change with hydro-meteorological services is key for the development of adequate adaptation measures. The impacts of climate change could be better mitigated through climate resilient planning and timely disaster preparedness measures. However, inadequate or non-existing climate and weather information, forecasts and analyses create severe limitations for developing informed and climate-responsive decision-making and put the population under high-risk conditions related to climate induced hazards and extreme weather events.Through a phased approach and a strong focus on capacity building, this project will allow Guinea-Bissau's to better manage climate related challenges that undermine economic growth and development addressing a number of pressing climatic challenges. These include the needs to: (i) enhance capacity of hydro-meteorological services and networks for predicting climatic events and associated risks; (ii) develop a more effective, efficient and targeted delivery of climate information including early warnings to both planners as well as communities living on the fringes of climate induced pressures; and (iii) support improved and timely preparedness and rehabilitated response to forecast climate-related risks and vulnerabilities.The project aims to strengthen the climate monitoring	001981 PMC	4/23/2024	12/31/2030		62160	Global Environment Fund Trustee	71400 - Contractual Services - Individ	15,535.00

The impacts of climate change could be better mitigated through climate resilient planning and timely disaster preparedness measures. However, inadequate or non-existing climate and weather information, forecasts and analyses create severe limitations for developing informed and climate-responsive decision-making and put the population under high-risk conditions related to climate induced hazards and extreme weather events.Through a phased approach and a strong focus on capacity building, this project will allow Guinea-Bissau's to better manage climate related challenges that undermine economic growth and development addressing a number of pressing climatic challenges. These include the needs to: (i) enhance capacity of hydro-meteorological services and networks for predicting climatic events and associated risks; (ii) develop a more effective, efficient and targeted delivery of climate information including early warnings to both planners as well as communities living on the fringes of climate induced pressures; and (iii) support improved and timely preparedness and rehabilitated response to forecast climate-related risks and vulnerabilities.The project aims to strengthen the climate monitoring	001981 PMC	4/23/2024	12/31/2030		62160	Global Environment Fund Trustee	71400 - Contractual Services - Individ	17,100.00

01002412 Climate change represents a major challenge for Guinea-Bissau's economy, geography and settlements as it will threaten livelihoods of those who depend on natural resources for a living. Monitoring climate change with hydro-meteorological services is key for the development of adequate adaptation measures. The impacts of climate change could be better mitigated through climate resilient planning and timely disaster preparedness measures. However, inadequate or non-existing climate and weather information, forecasts and analyses create severe limitations for developing informed and climate-responsive decision-making and put the population under high-risk conditions related to climate induced hazards and extreme weather events.Through a phased approach and a strong focus on capacity building, this project will allow Guinea-Bissau's to better manage climate related challenges that undermine economic growth and development addressing a number of pressing climatic challenges.
