01003490 This project aims to foster the development of rural mini-grids to improve access to clean, affordable, reliable renewable energy. In doing so, it plans to also diversify Fiji's energy mix to reduce carbon dioxide emissions from the Fijian power sector, contribute to national electricity access objectives and promote gender-balanced economic growth using electricity as an enabler for inclusive sustainable development. FREF is envisaged to electrify approximately 300 rural communities (households, schools and hospitals) in Fiji over the next 10 years using innovative renewable energy solutions. The provision of electricity is combined with modern auxiliary services such as smart meters, mobile payment, digital connectivity and clean water and sanitation solutions to - among other things - induce productive electricity use cases and lift standards of living in rural communities. The ability to productively harness the provided clean electricity is expected to enable rural Fijians to increase community income through multiple economic activities, reduce social inequality and promote gender inclusivity. All of which also contributes to building more climate informed resilient livelihoods. This project will seek to electrify at least 20 rural communities in 4 years to support the expeditious implementation of FREF as well as demonstrate best practices to shore up investments in FREF and its rural electrification objectives while building long term implementation and management capacity within the Department	Conduct capacity development measures to assure sustainability of programme results after reverting operations to the Fijian Government.	9/30/2024	12/29/2028		30071	GOVERNMENT OF FIJI	71200 - International Consultants	35,000.00
