Brief Description

The project will catalyse the development of decentralised, grid-connected small-scale renewable energy (RE) power generation market in Egypt and the solar PV in particular. The target is to facilitate the installation of at least 4 MW_p of new decentralised private PV capacity during the lifetime of the project, resulting in direct GHG reduction benefits of 66 kilo-tonnes of CO_{2eq}. Complementary indirect mitigation benefits are expected from the sustained market growth of the PV market after the project with estimated GHG reduction of about 0.6-0.7 million tonnes of CO_{2eq}.
